PHOTOGRAPHERS AND IMAGISTS

[pai-newyork.org](http://pai-newyork.org)

The PAI Vision: *To bring people together who are passionate about photography.*  
The PAI Mission: *To grow PAI, to share the joy of photography while building camaraderie and inspiring creativity*

**Thursday, May 17, 2018**

**Guest Speaker: Harvey Hellering**

**Please join PAI and be inspired by Harvey HELLERING's work.**

Harvey Hellering: A major member of PAI, will be speaking about his work and career as an art and travel photographer. Harvey is a member and exhibitor at the Salmagundi Club. He was, formally a North Folk L.I. resident and now a life long New Yorker. He was a Marketing Executive for a

Telecom company before becoming an art photographer who has captured landscapes, architectural and travel subjects around the world. In his roll as VP of marketing he spent time in Mexico, Japan as well as England and France. This gave him the opportunity to build in some extra time for his photography. Harvey describes himself as a member of the **“walk around and look”** branch of photography. Harvey’s color images capture both mood and moment, and his photos of Venice, Italy and Burgundy, France in particular exhibit a lost sensuality. Harvey was also the President of the East Side Arts Council.

Harvey Kopel writes:

A Wabi-sabi orchid beauty is in the eye of the beholder and today's blog is of a dying orchid but it is still a thing of beauty.

© Harvey Kopel

In traditional Japanese aesthetics, *Wabi-sabi* is a world view centered on the acceptance of transience and imperfection. The aesthetic is sometimes described as one of beauty that is "imperfect, impermanent, and incomplete". Characteristics of the *Wabi-sabi* aesthetic include asymmetry, roughness, simplicity, economy, austerity, modesty, intimacy, and appreciation of the ingenuous integrity of natural objects and processes.

I feel this photo of a dying orchid in the Orchid Show at the New York Botanical Garden is an example of *Wabi-sabi*. Canon 5d Mark iii, 1/180 at f13, Tamron 28-300 at 139mm, iso 3200

Robert Santangelo writes:

Crown of thorns, also called Christ thorn (*Euphorbia splendens* or *E. milii*), thorny vinelike plant of the spurge family (*Euphorbiaceae*), popular as a houseplant and in the tropics as a garden shrub. Flowering is year-round, but most plentiful in wintertime in the Northern Hemisphere
